22. RENEWAL PREMIUM CAPPING

Renewal premium capping is used to limit the impact to a customer's rate from one term to the next for changes that are caused by rate and rate plan. A customer's continuation or renewal premium will be capped from term to term by applying a Coverage Level Rate Cap factor in the calculations of specific coverage premiums and expense fee. This capping may occur whether the rate is increasing or decreasing from one policy term to the next.

Renewal premium capping will apply to Bodily Injury Liability, Property Damage, Medical Payments, Uninsured Motorist, Comprehensive, Collision, Customizing Equipment Coverage and Expense Fees. For the purposes of this Rule 22, the term premium is the sum of these coverage premiums and expense fees for private passenger autos, motor homes, recreational trailers, camper bodies, motorcycles and antique autos.

The Coverage Level Rate Cap factor will be calculated and applied as follows:

1. The re-rated expiring term premium is determined using the data elements and conditions on the expiring policy, at the time the continuation or renewal premium is calculated, and using base rates, rating factors and rules in effect at the time the prior term was written.
2. The uncapped renewal term premium is determined using the same data elements and conditions as used in the calculation of the re-rated expiring term premium, and using base rates, rating factors and rules in effect for the forthcoming renewal effective date.
3. If the renewal term has been revised to reflect a different term period, policy coverage option or coverage limit/deductible amount, etc., the calculation of both the re-rate expiring and uncapped renewal term premiums will reflect these revisions.
4. Calculate the ratio of the uncapped renewal term premium to the re-rated expiring term premium (round to 3).
5. Using the calculated ratio, lookup policy cap factor on Program Adjustments Table page based on 6- or 12-month policy term and years with Trumbull Insurance Company, Hartford Underwriters Insurance Company, Hartford Accident and Indemnity Company, Harford Casualty Insurance Company.
6. Calculate the adjusted re-rated expiring term premium by multiplying the re-rated expiring term premium by the policy cap factor.
7. Calculate the Coverage Level Rate Cap factor by dividing the adjusted re-rated expiring term premium by the uncapped renewal term premium. This factor will be applied to above listed coverage and expense fee for vehicle types eligible for capping.

Exceptions to capping:

- If a vehicle is added mid-term to a policy being capped, the capping factor will not be applied to the newly added vehicle until the next renewal term.
- If a listed vehicle on the expiring term policy has coverage suspended/reinstated and the same listed vehicle on the new term policy has coverage reinstated/suspended, the vehicle's premium will not be used in the calculation of the policy cap factor and the capping factor will not be applied.

NOTE: Policies capping under Rule 23-Book of Business Transfer are not eligible for capping under this rule. These policies will be evaluated for renewal premium capping if the factor determined in 23.4 is 1.00 and if the policy meets all of the requirements outlined above.

INCLUDES COPYRIGHTED MATERIAL OF INSURANCE SERVICES OFFICE

23. BOOK ACQUISITIONS AND TRANSFERS

This rule applies to policies converting from a Non-Hartford company that are a part of an approved acquisition or book of business transfer or for existing Hartford policies for which a new rate plan is being introduced.

For these policies, the premium for the initial and qualifying renewal terms will be capped by application of a Rate cap factor in accordance with the following:

1. *Capping will apply to Bodily Injury Liability, Property Damage, Medical Payments, Uninsured Motorist, Comprehensive, Collision, Customizing Equipment Coverage and Expense Fees. For the purposes of this rule, the full term premium is the sum of these coverage premiums and Expense fees for private passenger autos, motor homes, recreational trailers, camper bodies, motorcycles and antique vehicle types.
2. For the initial policy term, develop the full term premium as defined in 1. above using the rules and rates as of the effective date of the policy, divide by the prior carrier's premium , or in the case of a Hartford policy, the expiring term premium, and round to 3 decimal places.
3. For subsequent renewals, divide the uncapped full term renewal premium by the expiring full term premium and round to 3 decimal places.

   The expiring full term premium is determined using the data elements and conditions on the expiring policy, at the time the continuation or renewal premium is calculated, and using the rates and rules in effect at the time the prior term was written.

   The uncapped full term renewal premium is determined using the same data elements and conditions as used in the calculation of the re-rated expiring term premium, and using the rates in effect as of the forthcoming renewal effective date.

   If the renewal term has been revised to reflect a different term period, policy package coverage option or coverage limit/deductible amount, etc., the calculation of both the prior and new renewal term premiums will reflect these revisions.
4. For the initial policy term, use the factor developed in 2. to determine the Rate Cap factor from the Program Adjustment Table pages. For all subsequent terms, use the factor developed in 3.

   *Note: If the factor determined in 4. is 1.00, the policy is not subject to capping under Rule 23 but will now be eligible for capping under Rule 22.
5. For the initial policy term, multiply the factor determined in 4 to the full term premium.
6. For subsequent terms, multiply the factor determined in 4. by the uncapped full term renewal premium.

   Only if a policy qualifies for application of the Rate Cap factor on the initial policy term will it be reviewed at future renewal terms to determine whether it continues to qualify for premium capping.

   Once a policy does not qualify for renewal premium capping, it will no longer be reevaluated for qualification at future renewal terms.

   If a vehicle is added mid-term to a policy being capped, the capping factor will not be applied to the newly added vehicle until the next renewal term, but only if the policy continues to qualify for capping.

UNDERWRITING TIER GUIDELINES

Assess the eligibility of the risk for this program.

Using the risk characteristics for each of the underwriting tier variables determine the Underwriting Score for each coverage on each vehicle as follows:

For Non-Excess vehicles - multiply the applicable factors for each coverage for each of the underwriting variables.

For Excess Vehicles (MCTD)

a. Determine the average of the factors for each coverage of all Non-Excess vehicles for variables below.
   - Below Threshold At Fault
   - Not At Fault
   - Months Since Last Auto Incident
   - Months Since Last Policy Incident if Incident Free Car
   - Number of Auto Incidents/Policy Average
   - Auto Incident Count
   - Driver Age / Auto Incidents
   - Score Group / Auto Incidents
b. All other variables, select the appropriate factor by coverage.
c. Multiply the factors determined in a. and b. for each coverage.

For Miscellaneous type vehicle only policies, use the risk characteristics of the first listed Principal Operator(s) only.

Using the Underwriting Tier Score Chart, identify which Score Range encompasses the Underwriting Score calculated above and assign the corresponding Underwriting Tier for each coverage afforded.

Notes :
Incident includes all accidents and motor vehicle violation convictions within the 5 year experience period.

Not at fault accidents and comprehensive losses are not used for tiering.

The first at fault accident below the threshold may be forgiven if the Advantage PLUS coverage is part of the policy at the time of the incident and remains on the policy.
To be forgiven, all drivers must be free of major moving traffic convictions; and accidents, for a minimum of 5 years prior to the incident and no other accidents have been waived under the Safe Driver Insurance plan.

New Business' means the first year and 'Renewal Business' means all subsequent terms.

To calculate months, use difference between the policy effective date and the date of the most recent incident incurred by the operator(s) that customarily operate the vehicle and divided by 30. Increment months by one if remainder greater than zero.
Note: 'New Business' means the first year and 'Renewal Business' means all subsequent terms.

UNDERWRITING TIER GUIDELINES

Assess the eligibility of the risk for this program.

Using the risk characteristics for each of the underwriting tier variables determine the Underwriting Score for each coverage on each vehicle as follows:

For Non-Excess vehicles - multiply the applicable factors for each coverage for each of the underwriting variables.

For Excess Vehicles (MCTD)

a. Determine the average of the factors for each coverage of all Non-Excess vehicles for variables below.
   - Below Threshold At Fault
   - Not At Fault
   - Months Since Last Auto Incident
   - Months Since Last Policy Incident if Incident Free Car
   - Number of Auto Incidents/Policy Average
   - Auto Incident Count
   - Driver Age / Auto Incidents
   - Score Group / Auto Incidents
b. All other variables, select the appropriate factor by coverage.
c. Multiply the factors determined in a. and b. for each coverage.

For Miscellaneous type vehicle only policies, use the risk characteristics of the first listed Principal Operator(s) only.

Using the Underwriting Tier Score Chart, identify which Score Range encompasses the Underwriting Score calculated above and assign the corresponding Underwriting Tier for each coverage afforded.

To calculate months, use difference between the policy effective date and the date of the most recent incident incurred by the operator(s) that customarily operate the vehicle and divided by 30. Increment months by one if remainder greater than zero.
Note: 'New Business' means the first year and 'Renewal Business' means all subsequent terms.

THE HARTFORD

EXPLANATORY MEMORANDUM

Effective November 20, 2014

This filing is for a rate revision to our business written in the above named writing companies. We are proposing these changes to be effective November 20, 2014 and for renewal policies effective on or after January 25, 2015 for Trumbull Insurance Company and on or after January 18, 2015 for Hartford Accident and Indemnity Company, Hartford Underwriters Insurance Company and Hartford Casualty Insurance Company.

RATE STRUCTURE AND CLASS PLAN

This plan modifies our existing new business class plan. We are modifying the factors based on an analysis of 2008-2013 loss data for both our Direct and Agency channels.

Existing policyholders will renew into the refreshed plan as well as new business. Rate capping will be used in order to limit the impact to existing customers as they renew into the new plan. The rate capping is described in the rule manual included with this filing.

The factors included in the filing are based on Generalized Linear Models of pure premium. Generalized Linear Models (GLM) is a widely accepted technique for pricing personal automobile. This multivariate approach provides a strong statistical framework that adjusts for correlations and allows for interactions.

After completion of the GLM, factors were adjusted to improve loss ratio equity, to reflect market pricing and retention and to correct factor reversals and transitions.

MULTIVARIATE REGRESSION ANALYSIS

The new class plan indications were developed using a series of multivariate generalized linear models (GLMs). Today GLMs are widely recognized as the industry standard for developing class level pricing factors for private passenger auto as well as other personal lines.

A GLM is a generalized form of the linear regression model. The purpose of both linear and generalized linear models is to express a relationship between an observed response variable (e.g. claim frequency, claim severity, pure premium or loss ratio) and a number of predictor variables (e.g. driver age, number of at fault accidents, vehicle age, etc.). The advantage of GLMs over linear models is that the restriction assumptions of Normality, constant variance and additivity of effects are removed. Instead the response variable is assumed to be a member of the exponential family of distributions. Also, the variance is permitted to vary as a function of the mean of the distribution. And the effect of the predictor variables on the response variable is assumed to be additive on a transformed scale.

For the new class plan, GLMs were constructed separately for pure premium for each of the personal auto coverages. The data used was on a vehicle level basis; it included policy years 2008 to 2013 evaluated as of March 31, 2013 (claims excluded catastrophe losses). Only losses were used in the analysis, loss adjustment expenses were not included. Losses and claim counts were developed to ultimate. No trending was applied.

Tweedie distributions were used for the models; exposure years were used as weights. The models used the individual underwriting tier variables and class plan variables as the predictor variables.

THE HARTFORD

Rule and Rate Pages

The rule manual has been re-formatted to remove rating factors and/or rates from most of the rules. A Rate Order of Calculation has been added to the rule manual to display rating algorithms. All rules remain the same as previously filed except for rule 22 and 23, noted below. The rating factors and/or rates have been placed on separate rate pages.

We now display one base rate per coverage with relativities shown by coverage territory. The coverage territories have been revised. Base rates, coverage territory with assigned zip codes and coverage territory relativities are displayed in the attached rate pages. Other revised rating factors are attached as well.

Separate rate pages are included for the Direct writing companies and Agency writing companies.

A complete revised manual is included in this filing.

Renewal Premium Capping (Rule 22)

Rate capping will be utilized to cap the effect of the changes proposed in this filing. The low end cap applying to decreases is -5.0%, and the high end cap applying to increases is +15.0.

Policies that had completed rate capping under Book Acquisitions and Transfers (Rule 23) will now be immediately eligible for the Renewal Premium Capping rule. Formerly, there would be a 1 year waiting period before these policies would be evaluated under Renewal Premium Capping (Rule 22).

Book of Business Transfers (Rule 23)
This rule has been revised to include the note regarding when a policy would be evaluated under the Renewal Premium Capping (Rule 22).

Rate Level Changes

Explanatory Notes

Line

(2) The trended earned premium at present rates is calculated by extending earned exposures by current manual rates and by reflecting the current classification factors and the premium trend factors.

(5) The accident year losses have been developed to an ultimate settlement basis as shown on the Loss Development sheets in Exhibit II of this filing. The developed losses are trended to the average date of loss for the proposed rate level.

(9) Credibility for all coverages is based on the sum of the claims for the number of years used to calculate the rate level indications. The development of these factors is shown in detail in Exhibit II Credibility.

(10) The permissible loss and loss expense ratios were developed from The Hartford expense experience data. The allocation of the premium dollar is as follows:

	Bodily Injury	Property Damage	Uninsured Motorist	Personal Injury Protection	Compre-hensive	Collision
