Objection Letter

Objection Letter Status	Pending Industry Response
Objection Letter Date	04/15/2008
Submitted Date	04/15/2008
Respond By Date	

Dear Brenda Dorogi,

This will acknowledge receipt of the captioned filing. Some of the exhibits refer to Farmers Insurance Exchange, and the remainder of the filing references Farmers Insurance Company. Please clarify and correct the inaccurate exhibits.

Please feel free to contact me if you have questions.
Sincerely,
Alexa Grissom

Response Letter

CREDIBILITY - WEIGHTED LOSS TREND FACTORS

While the trend factors based solely on Arkansas data are not fully credible for all coverages, they should be given some consideration in the ratemaking process. In selecting the degree of credibility assigned to these trends, we used a method similar to those described by L.H. Longley-Cook in his paper "An Introduction to Credibility Theory".

Longley-Cook points out that a sample of 1,537 claims would result in a frequency calculation, which has a 95% probability of being within 5% of the "actual" underlying frequency. He also points out that this sample size must be multiplied by a factor of (1+ T) to achieve the same degree of confidence in the calculated pure premiums, where T is a measure of the variance of the underlying distribution of claim costs. Longley-Cook goes on to state that this value "for most lines of insurance ranges between 2 and 4". Rather than estimate the value of T from the underlying claim s size distribution for each coverage, a mean value of 3 was selected. Thus, the number of claims per year (based on a rolling 4-quarter sum) needed to have a 95% probability of that annual pure premium amount's being within 5% of the "actual" is (1 + 3) * 1,537 = 6,148.

Longley-Cook also points out that a trend line is essentially a difference between points and that the credibility of the trend factor would, therefore, be lower than the credibility of the individual points. This decrease in credibility was taken into account in selecting a relatively severe criterion (95% within 5%) for each point.

A sample of 6,148 claims per year was assumed to be fully credible. Partial credibility was based on:

$$\text{Credibility} = (\text{Number of Claims in Rolling 4-Quarter Period} / 6{,}148)^{1/2}$$

The compliment of the credibility was assigned to the Companywide trends.

FIG Consolidated figures exclude Foremost companies.
Commissions & Brokerages are computed as a percentage of Written Premium
The 2004 - 2005 Other Acquisition Expense and General Expense have been restated to conform to 2006 accounting conventions.
The Selected Ratio for Other Acquisition and General Expenses is adjusted for the following
(1) state-specific expenses: removal of the latest year amounts and inclusion of 3-year average for Arkansas, and
(2) advertising expense and underwriting fees expected in the prospective period.
Other Acquisition and General Expenses are computed as a percentage of Earned Premium.

CREDIBILITY - WEIGHTED LOSS TREND FACTORS

While the trend factors based solely on Arkansas data are not fully credible for all coverages, they should be given some consideration in the ratemaking process. In selecting the degree of credibility assigned to these trends, we used a method similar to those described by L.H. Longley-Cook in his paper "An Introduction to Credibility Theory".

Longley-Cook points out that a sample of 1,537 claims would result in a frequency calculation, which has a 95% probability of being within 5% of the "actual" underlying frequency. He also points out that this sample size must be multiplied by a factor of (1+ T) to achieve the same degree of confidence in the calculated pure premiums, where T is a measure of the variance of the underlying distribution of claim costs. Longley-Cook goes on to state that this value "for most lines of insurance ranges between 2 and 4". Rather than estimate the value of T from the underlying claim s size distribution for each coverage, a mean value of 3 was selected. Thus, the number of claims per year (based on a rolling 4-quarter sum) needed to have a 95% probability of that annual pure premium amount's being within 5% of the "actual" is (1 + 3) * 1,537 = 6,148.

Longley-Cook also points out that a trend line is essentially a difference between points and that the credibility of the trend factor would, therefore, be lower than the credibility of the individual points. This decrease in credibility was taken into account in selecting a relatively severe criterion (95% within 5%) for each point.

A sample of 6,148 claims per year was assumed to be fully credible. Partial credibility was based on:

$$\text{Credibility} = (\text{Number of Claims in Rolling 4-Quarter Period} / 6{,}148)^{1/2}$$

The compliment of the credibility was assigned to the Companywide trends.

FIG Consolidated figures exclude Foremost companies.
Commissions & Brokerages are computed as a percentage of Written Premium
The 2004 - 2005 Other Acquisition Expense and General Expense have been restated to conform to 2006 accounting conventions.
The Selected Ratio for Other Acquisition and General Expenses is adjusted for the following:
(1) state-specific expenses: removal of the latest year amounts and inclusion of 3-year average for Arkansas, and
(2) advertising expense and underwriting fees expected in the prospective period.
Other Acquisition and General Expenses are computed as a percentage of Earned Premium.

Attn: Property and Casualty

Subject: **Private Passenger Auto Rate and Rule Filing**
Rates and Rules Revision - Proposed Effective 08/01/08
Farmers Insurance Company, Inc. (AAR0801-202270)
Filing Reference Number: AAR0801-202270

Dear Commissioner Bowman:

We respectfully submit for filing revisions to our Private Passenger Automobile Rates and Rules for Farmers Insurance Exchange. The proposed effective date of August 1, 2008 is for both New Business and Renewals. Attached are supporting exhibits for this rate revision.

The overall calculated and proposed changes by coverage are as follows:

Farmers Insurance Company Coverage	**Indicated Change**	**Proposed Change**	**Estimated Annual $ Premium Effect**
Bodily Injury – Property Damage	6.4%	5.0%	$1,699,903
Uninsured Motorist	23.5%	18.6%	$1,423,513
Personal Injury Protection	7.0%	7.8%	$402,912
Comprehensive	1.4%	6.0%	$569,629
Collision	4.8%	6.3%	$1,444,520
Total	7.0%	7.0%	$5,540,478

The remainder of this filing is divided into three sections, to assist your review of our proposal, as follows:

Part I – Exhibits providing detailed explanations and data supporting our proposal
Part II – Description of Changes
Part III – Manual Pages

Part I – Supporting Exhibits

The following exhibits have been attached to provide actuarial support for the proposed overall rate level change.

Exhibit A , Summary of changes
A summary of our proposed changes and its premium effects regarding this filing are shown in Exhibit A.

Exhibit B, Pages 1 thru 5 – Accident Year Indicated Rate Level Changes for Bodily Injury/Property Damage, Uninsured Motorist, Personal Injury Protection, Comprehensive, and Collision coverages

Calculations of our rate level indications are contained in this exhibit. This exhibit shows indications based on three fiscal accident years of experience ending December 31, 2007, for all coverages: Bodily Injury - Property Damage, Uninsured Motorist, Personal Injury Protection, Comprehensive, and Collision. Varying weights for each year were used depending on claim volume within the coverage. The Comprehensive indication is catastrophe adjusted.

Indications for all coverages assume an effective date of August 1, 2008. They include earned premium at current rate levels and losses projected to the average accident date, June 1, 2009, using an annualized trend factor. Premium trends are applied to all coverages and account for the changing mix of business, including the effect of model year rating and car symbol drift on physical damage coverages and the effect of deductible shifts for liability coverages.

Each indication is calculated using a target combined ratio which includes consideration of investment income. Two distinct target combined ratios are used, one for Auto Liability coverages and one for Auto Physical Damage coverages. The details for both ratios are shown in Exhibit G.

Exhibit C – Credibility Weighted Loss Trend Selections, Determination of Loss Trend
Page 1 of Exhibit C provides an explanation of the credibility method used in obtaining annualized loss trend factors found on page 2 of Exhibit C.

Pages 3 thru 9 of exhibit B show the selected pure premium trend, computed from the selected severity and frequency trends, which are based on an exponential curve fit of Farmers Insurance Company data. A two-part trending procedure is used to trend losses by coverage. First, an historical trend is selected to trend each accident year of the experience period to the midpoint of the latest accident year. Second, a "future" trend is selected to bring the entire experience period (now at the midpoint of the latest accident year) to the midpoint of the projection period. The "Selected Historical Trend" by coverage is the Arkansas Farmers trend credibility-weighted with company-wide data. The credibility assigned to the Arkansas Farmers historical trend for a given coverage is the square root of the ratio of the average number of quarterly claims for that coverage and 6,148, with 6,148 being the standard for full credibility. As the future trends are judgmentally selected to reflect anticipated changes in loss costs, they are not credibility-weighted.

Exhibit D, Pages 1 thru 14
Loss Development Exhibits for by Coverage (BI, PD, UMBI, UMPD, PIP, CCD, and COLL)
Exhibit D, Pages 1 thru 14 provides accident year development of incurred losses and allocated loss adjustment expense paid to paid amount ratio for each coverage is included. Selected factors were generally chosen to be

the "Olympic" (which excludes the high and low figure) average of the most recent five years of development factors. but when warranted by the data, a different selection method was used.

Accident year development of the ratio of paid allocated loss adjustment expense to paid loss is also included in Exhibit D for each coverage. Traditionally, we estimate accident-year Allocated Loss Adjustment Expense ultimates for each coverage separately. The ultimate ALAE ratios (Paid ALAE / Paid Loss) by coverage are developed by using the Bornhuetter-Fergusson method. Ultimate ALAE is the product of ultimate ALAE ratios and the ultimate incurred losses.

Exhibit E, Pages 1 thru 5 - Determination of Premium Trend
This exhibit shows the calculation of the premium trend components for each coverage. The trend is derived from a least squares exponential fit of the 6 months rolling average premiums, brought to current rate level, per policy for the years ending December 2007.

Exhibit F - Catastrophe Factor Calculation
The Comprehensive indication is catastrophe adjusted. The catastrophe factor is the ratio of the past twenty years total paid losses to the past twenty years total non-cat paid losses.

Exhibit G - Investment Income and Expense Exhibits
This exhibit provides support for the permissible loss and ALAE ratio used in our indications. To enable our company to serve the future insurance needs of our present policyholders and to meet our obligations in a growing market, our policyholders' surplus must increase at a rate sufficient to maintain a proper level in relation to written premiums.

Details of the calculations of our investment income and expenses are found in the following subparts of Exhibit G.

Permissible Loss and ALAE Ratio (G-1, G -2)
Pages 1 and 2 of exhibit G provides a summary of the parameters used in the formula for target total return as a percentage of premium. The equation for total return is the Calendar Year Return on Equity (CYROE) model. The equation consists of three terms: (1) The first term accounts for after-tax underwriting gain or loss, where 1-E-L=U, the underwriting profit provision; (2) The second term characterizes the after-tax investment return on losses, LAE and unearned premium reserves; and (3) The final term reflects after-tax investment return on surplus. This equation has been rearranged to yield the permissible loss and ALAE ratio, L, used to determine the statewide average indication. The target combined ratio, C, equals the sum of L and the underwriting expenses, E. The target rate of return assumes a premium-to-surplus ratio of 2.00 to 1.00 for Auto Liability and 4.00 to 1.00 for Auto Physical Damage. The target rate of return also assumes a 15.0% after-tax return on equity.

Expense Analysis (G -3, G - 4)
Pages 3 and 4 of exhibit G summarizes underwriting expenses for 2004-2006 and the expected percentages of these expenses for the period in which the proposed rates will be in effect.

Unearned Premium Reserve (G -5, G -6)
Unearned premium reserve as a percentage of earned premium is a component of investment income on reserves. The change in unearned premium reserve as a percentage of earned premium is used as part of a component to offset underwriting income.

Loss and LAE Reserves (G -7, G -8)
Loss and LAE reserve (2004-2006), as a percentage of Incurred Loss and ALAE, is applied to the Permissible Loss and ALAE ratio and is the other component of investment income on reserves. This three-year average of the change in Loss and LAE as a percentage of Incurred Loss and ALAE is used as a part of a component to offset underwriting income.

Projected Investment Income Ratio & Net Realized Capital Gains (G -9, G -10)
This exhibit shows the projected investment income ratio as the average of the investment income ratios for 2004-2006. Also shown is the projected net realized capital gains, which is the average net realized capital gains for 1980-2006. Both ratios are shown as a percentage of total assets, and their sum represents our total investment gain.

Federal Taxes on Investment Income (G -11)
This exhibit contains the method used to compute federal taxes on investment income, based on the current federal income tax rate and the taxable portion applicable to each component of investment income.

Part II – Description of Changes

Exhibit H – Base Rate by Zip Code
Our proposed base rate changes by Zip Code are provided by coverage. (Exhibit H-1)
Territory alignment is showed as Exhibit H-2.

Exhibit I – Affinity Discount (Registered Nurses and Physicians)
We are proposing to increase our Affinity discount on Registered Nurses and Physicians from 5% to 10% across Bodily Injury/Property Damage, Uninsured/Underinsured Motorist, Personal Injury Protection, Comprehensive, and Collision coverage.

Exhibit J – Deductibles
We are changing the deductible factors for Comprehensive and Collision. Exhibit J provides the new factors for this change.

Exhibit K – FARA/Tier Factors
We are revising the FARA and Tier Discount Factors based on indications. Exhibit K provides the new factors for this change.

Part III- Manual Page Revisions

Finally, we have enclosed revised rate and rule pages for the changes listed above. Final manual pages will be provided upon receipt of your approval.

Our proposed effective date for this filing is **August 1, 2008** for both New Business and Renewals. Your acknowledgement of receipt of this material is greatly appreciated.

Please direct questions or concerns to Yuan Li. His direct line is (323) 930-7699.

Very truly yours,

Rates and Rules Revision - Proposed Effective 08/01/08
Mid-Century Insurance Company, Inc. (AAR0801-402270)
Filing Reference Number: AAR0801-402270

Dear Commissioner Bowman:

We respectfully submit for filing revisions to our Private Passenger Automobile Rates and Rules for Mid-Century Insurance Exchange. The proposed effective date of August 1, 2008 is for both New Business and Renewals. Attached are supporting exhibits for this rate revision.

The overall calculated and proposed changes by coverage are as follows:

Mid-Century Insurance Company Coverage	**Indicated Change**	**Proposed Change**	**Estimated Annual $ Premium Effect**
Bodily Injury – Property Damage	13.7%	8.5%	$944,603
Uninsured Motorist	-1.4%	3.7%	$41,819
Personal Injury Protection	8.8%	9.7%	$84,274
Comprehensive	13.7%	11.1%	$78,606
Collision	-9.6%	3.3%	$133,035
Total	7.2%	7.2%	$1,282,337

The remainder of this filing is divided into three sections, to assist your review of our proposal, as follows:

Part I – Exhibits providing detailed explanations and data supporting our proposal
Part II – Description of Changes
Part III – Manual Pages

Part I – Supporting Exhibits

The following exhibits have been attached to provide actuarial support for the proposed overall rate level change.

Exhibit A , Summary of changes
A summary of our proposed changes and its premium effects regarding this filing are shown in Exhibit A.

Exhibit B, Pages 1 thru 5 – Accident Year Indicated Rate Level Changes for Bodily Injury/Property Damage, Uninsured Motorist, Personal Injury Protection, Comprehensive, and Collision coverages

Calculations of our rate level indications are contained in this exhibit. This exhibit shows indications based on three fiscal accident years of experience ending December 31, 2007, for all coverages: Bodily Injury - Property Damage, Uninsured Motorist, Personal Injury Protection, Comprehensive, and Collision. Varying weights for each year were used depending on claim volume within the coverage. The Comprehensive indication is catastrophe adjusted.

Indications for all coverages assume an effective date of August 1, 2008. They include earned premium at current rate levels and losses projected to the average accident date, June 1, 2009, using an annualized trend factor. Premium trends are applied to all coverages and account for the changing mix of business, including the effect of model year rating and car symbol drift on physical damage coverages and the effect of deductible shifts for liability coverages.

Each indication is calculated using a target combined ratio which includes consideration of investment income. Two distinct target combined ratios are used, one for Auto Liability coverages and one for Auto Physical Damage coverages. The details for both ratios are shown in Exhibit G.

Exhibit C – Credibility Weighted Loss Trend Selections, Determination of Loss Trend
Page 1 of Exhibit C provides an explanation of the credibility method used in obtaining annualized loss trend factors found on page 2 of Exhibit C.

Pages 3 thru 9 of exhibit B show the selected pure premium trend, computed from the selected severity and frequency trends, which are based on an exponential curve fit of Farmers Insurance Company data. A two-part trending procedure is used to trend losses by coverage. First, an historical trend is selected to trend each accident year of the experience period to the midpoint of the latest accident year. Second, a "future" trend is selected to bring the entire experience period (now at the midpoint of the latest accident year) to the midpoint of the projection period. The "Selected Historical Trend" by coverage is the Arkansas Farmers trend credibility-weighted with company-wide data. The credibility assigned to the Arkansas Farmers historical trend for a given coverage is the square root of the ratio of the average number of quarterly claims for that coverage and 6,148, with 6,148 being the standard for full credibility. As the future trends are judgmentally selected to reflect anticipated changes in loss costs, they are not credibility-weighted.

Exhibit D, Pages 1 thru 14
Loss Development Exhibits for by Coverage (BI, PD, UMBI, UMPD, PIP, CCD, and COLL)
Exhibit D, Pages 1 thru 14 provides accident year development of incurred losses and allocated loss adjustment expense paid to paid amount ratio for each coverage is included. Selected factors were generally chosen to be the "Olympic" (which excludes the high and low figure) average of the most recent five years of development factors, but when warranted by the data, a different selection method was used.

Accident year development of the ratio of paid allocated loss adjustment expense to paid loss is also included in Exhibit D for each coverage. Traditionally, we estimate accident-year Allocated Loss Adjustment Expense ultimates for each coverage separately. The ultimate ALAE ratios (Paid ALAE / Paid Loss) by coverage are developed by using the Bornhuetter-Fergusson method. Ultimate ALAE is the

product of ultimate ALAE ratios and the ultimate incurred losses.

Exhibit E, Pages 1 thru 5 - Determination of Premium Trend
This exhibit shows the calculation of the premium trend components for each coverage. The trend is derived from a least squares exponential fit of the 6 months rolling average premiums, brought to current rate level, per policy for the years ending December 2007.

Exhibit F - Catastrophe Factor Calculation
The Comprehensive indication is catastrophe adjusted. The catastrophe factor is the ratio of the past twenty years total paid losses to the past twenty years total non-cat paid losses.

Exhibit G - Investment Income and Expense Exhibits
This exhibit provides support for the permissible loss and ALAE ratio used in our indications. To enable our company to serve the future insurance needs of our present policyholders and to meet our obligations in a growing market, our policyholders' surplus must increase at a rate sufficient to maintain a proper level in relation to written premiums.

Details of the calculations of our investment income and expenses are found in the following subparts of Exhibit G.

Permissible Loss and ALAE Ratio (G-1, G -2)
Pages 1 and 2 of exhibit G provides a summary of the parameters used in the formula for target total return as a percentage of premium. The equation for total return is the Calendar Year Return on Equity (CYROE) model. The equation consists of three terms: (1) The first term accounts for after-tax underwriting gain or loss, where 1-E-L=U, the underwriting profit provision; (2) The second term characterizes the after-tax investment return on losses, LAE and unearned premium reserves; and (3) The final term reflects after-tax investment return on surplus. This equation has been rearranged to yield the permissible loss and ALAE ratio, L, used to determine the statewide average indication. The target combined ratio, C, equals the sum of L and the underwriting expenses, E. The target rate of return assumes a premium-to-surplus ratio of 2.00 to 1.00 for Auto Liability and 4.00 to 1.00 for Auto Physical Damage. The target rate of return also assumes a 15.0% after-tax return on equity.

Expense Analysis (G -3, G - 4)
Pages 3 and 4 of exhibit G summarizes underwriting expenses for 2004-2006 and the expected percentages of these expenses for the period in which the proposed rates will be in effect.

Unearned Premium Reserve (G -5, G -6)
Unearned premium reserve as a percentage of earned premium is a component of investment income on reserves. The change in unearned premium reserve as a percentage of earned premium is used as part of a component to offset underwriting income.

Loss and LAE Reserves (G -7, G -8)
Loss and LAE reserve (2004-2006), as a percentage of Incurred Loss and ALAE, is applied to the Permissible Loss and ALAE ratio and is the other component of investment income on reserves. This three-year average of the change in Loss and LAE as a percentage of Incurred Loss and ALAE is used as a part of a component to offset underwriting income.

Projected Investment Income Ratio & Net Realized Capital Gains (G -9, G -10)
This exhibit shows the projected investment income ratio as the average of the investment income ratios for 2004-2006. Also shown is the projected net realized capital gains, which is the average net realized

capital gains for 1980-2006. Both ratios are shown as a percentage of total assets, and their sum represents our total investment gain.

Federal Taxes on Investment Income (G -11)
This exhibit contains the method used to compute federal taxes on investment income, based on the current federal income tax rate and the taxable portion applicable to each component of investment income.

Part II – Description of Changes

Exhibit H – Base Rate by Zip Code
Our proposed base rate changes by Zip Code are provided by coverage. (Exhibit H-1)
Territory alignment is showed as Exhibit H-2.

Exhibit I – Affinity Discount (Registered Nurses and Physicians)
We are proposing to increase our Affinity discount on Registered Nurses and Physicians from 5% to 10% across Bodily Injury/Property Damage, Uninsured/Underinsured Motorist, Personal Injury Protection, Comprehensive, and Collision coverage.

Exhibit J – Deductibles
We are changing the deductible factors for Comprehensive and Collision. Exhibit J provides the new factors for this change.

Exhibit K – FARA/Tier Factors
We are revising the FARA and Tier Discount Factors based on indications. Exhibit K provides the new factors for this change.

Part III- Manual Page Revisions

Finally, we have enclosed revised rate and rule pages for the changes listed above.

Our proposed effective date for this filing is August 1, 2008 for both New Business and Renewals. Your acknowledgement of receipt of this material is greatly appreciated.

Please direct questions or concerns to Yuan Li. His direct line is (323) 930-7699.

RATE FILING ABSTRACT

Form RF-1
Rev. 4/96

Insurer Name: Mid Century Insurance Company, Inc.
NAIC Number: 21687
Name of Advisory Organization Whose Filing You Are Referencing:
Co. Affiliation to Advisory Organization: Member_____ Subscriber_____ Service Purchaser_____
Reference Filing #: _____ Proposed Effective Date: 08/01/08

Contact Person: Yuan Li
Signature:
Telephone No: (323) 932-7699

(1) LINE OF INSURANCE By Coverage	(2) Indicated % Rate Level Change	(3) Requested % Rate Level Change	FOR LOSS COSTS ONLY (4) Expected Loss Ratio	(5) Loss Cost Modification Factor	(6) Selected Loss Cost Multiplier	(7) Expense Constant (If Applicable)	(8) Co. Current Loss Cost Multiplier
BIPD	13.7	8.5	N/A	N/A	N/A	N/A	N/A
UM	-1.4	3.7					
COMP	13.7	11.1					
COLL	-9.6	3.3					
MED/NF	8.8	9.7					
TOTAL OVERALL EFFECT	7.2	7.2					

N Apply Loss Cost Factors to Future Filings? (Y or N)
9.7% Estimated Maximum Rate Increase for any Arkansas Insured (%) **
-8.0% Estimated Maximum Rate Decrease for any Arkansas Insured (%) **

Corresponds to Question 3 on RF-2 or RF-WC

5 Year History

Year	Policy Count***	Rate Change History %	Eff. Date	AR Earned* Premium (000)	Incurred* Losses (000)	Arkansas Loss Ratio	Countrywide Loss Ratio
2003	19,061	N/A	N/A	20,065	11,250	56%	60%
2004	19,239	-0.09%	04/01/07	21,359	11,541	54%	66%
2005	19,077	N/A	N/A	20,460	12,203	62%	65%
2006	17,260	-0.13%	11/01/06	19,395	12,856	62%	63%
2007	14,852	4.00%	05/01/07	18,168	11,287	62%	66%

		Selected Provisions
A.	Total Production Expense	N/A
B.	General Expense	N/A
C.	Taxes, License, & Fees	N/A

Subject: **Private Passenger Auto Rate and Rule Filing**
Rates and Rules Revision - Proposed Effective 08/01/08
Farmers Insurance Company, Inc. (AAR0801-202270)
Filing Reference Number: AAR0801-202270

Dear Commissioner Bowman:

We respectfully submit for filing revisions to our Private Passenger Automobile Rates and Rules for Farmers Insurance Company, Inc. The proposed effective date of August 1, 2008 is for both New Business and Renewals. Attached are supporting exhibits for this rate revision.

The overall calculated and proposed changes by coverage are as follows:

Farmers Insurance Company Coverage	**Indicated Change**	**Proposed Change**	**Estimated Annual $ Premium Effect**
Bodily Injury – Property Damage	6.4%	5.0%	$1,699,903
Uninsured Motorist	23.5%	18.6%	$1,423,513
Personal Injury Protection	7.0%	7.8%	$402,912
Comprehensive	1.4%	6.0%	$569,629
Collision	4.8%	6.3%	$1,444,520
Total	7.0%	7.0%	$5,540,478

The remainder of this filing is divided into three sections, to assist your review of our proposal, as follows:

Part I – Exhibits providing detailed explanations and data supporting our proposal
Part II – Description of Changes

Part III – Manual Pages

Part I – Supporting Exhibits

The following exhibits have been attached to provide actuarial support for the proposed overall rate level change.

Exhibit A , Summary of changes

A summary of our proposed changes and its premium effects regarding this filing are shown in Exhibit A.

Exhibit B, Pages 1 thru 5 – Accident Year Indicated Rate Level Changes for Bodily Injury/Property Damage, Uninsured Motorist, Personal Injury Protection, Comprehensive, and Collision coverages

Calculations of our rate level indications are contained in this exhibit. This exhibit shows indications based on three fiscal accident years of experience ending December 31, 2007, for all coverages: Bodily Injury - Property Damage, Uninsured Motorist, Personal Injury Protection, Comprehensive, and Collision. Varying weights for each year were used depending on claim volume within the coverage. The Comprehensive indication is catastrophe adjusted.

Indications for all coverages assume an effective date of August 1, 2008. They include earned premium at current rate levels and losses projected to the average accident date, June 1, 2009, using an annualized trend factor. Premium trends are applied to all coverages and account for the changing mix of business, including the effect of model year rating and car symbol drift on physical damage coverages and the effect of deductible shifts for liability coverages.

Each indication is calculated using a target combined ratio which includes consideration of investment income. Two distinct target combined ratios are used, one for Auto Liability coverages and one for Auto Physical Damage coverages. The details for both ratios are shown in Exhibit G.

Exhibit C – Credibility Weighted Loss Trend Selections, Determination of Loss Trend

Page 1 of Exhibit C provides an explanation of the credibility method used in obtaining annualized loss trend factors found on page 2 of Exhibit C.

Pages 3 thru 9 of exhibit B show the selected pure premium trend, computed from the selected severity and frequency trends, which are based on an exponential curve fit of Farmers Insurance Company data. A two-part trending procedure is used to trend losses by coverage. First, an historical trend is selected to trend each accident year of the experience period to the midpoint of the latest accident year. Second, a "future" trend is selected to bring the entire experience period (now at the midpoint of the latest accident year) to the midpoint of the projection period. The "Selected Historical Trend" by coverage is the Arkansas Farmers trend credibility-weighted with company-wide data. The credibility assigned to the Arkansas Farmers historical trend for a given coverage is the square root of the ratio of the average number of quarterly claims for that coverage and 6,148, with 6,148 being the standard for full credibility. As the future trends are judgmentally selected to reflect anticipated changes in loss costs, they are not credibility-weighted.

Exhibit D, Pages 1 thru 14
Loss Development Exhibits for by Coverage (BI, PD, UMBI, UMPD, PIP, CCD, and COLL)
Exhibit D, Pages 1 thru 14 provides accident year development of incurred losses and allocated loss adjustment expense paid to paid amount ratio for each coverage is included. Selected factors were generally chosen to be the "Olympic" (which excludes the high and low figure) average of the most recent five years of development factors. but when warranted by the data, a different selection method was used.

Accident year development of the ratio of paid allocated loss adjustment expense to paid loss is also included in Exhibit D for each coverage. Traditionally, we estimate accident-year Allocated Loss Adjustment Expense ultimates for each coverage separately. The ultimate ALAE ratios (Paid ALAE / Paid Loss) by coverage are developed by using the Bornhuetter-Fergusson method. Ultimate ALAE is the product of ultimate ALAE ratios and the ultimate incurred losses.

Exhibit E, Pages 1 thru 5 - Determination of Premium Trend
This exhibit shows the calculation of the premium trend components for each coverage. The trend is derived from a least squares exponential fit of the 6 months rolling average premiums, brought to current rate level, per policy for the years ending December 2007.

Exhibit F - Catastrophe Factor Calculation
The Comprehensive indication is catastrophe adjusted. The catastrophe factor is the ratio of the past twenty years total paid losses to the past twenty years total non-cat paid losses.

Exhibit G - Investment Income and Expense Exhibits
This exhibit provides support for the permissible loss and ALAE ratio used in our indications. To enable our company to serve the future insurance needs of our present policyholders and to meet our obligations in a growing market, our policyholders' surplus must increase at a rate sufficient to maintain a proper level in relation to written premiums.

Details of the calculations of our investment income and expenses are found in the following subparts of Exhibit G.

Permissible Loss and ALAE Ratio (G-1, G -2)
Pages 1 and 2 of exhibit G provides a summary of the parameters used in the formula for target total return as a percentage of premium. The equation for total return is the Calendar Year Return on Equity (CYROE) model. The equation consists of three terms: (1) The first term accounts for after-tax underwriting gain or loss, where 1-E-L=U, the underwriting profit provision; (2) The second term characterizes the after-tax investment return on losses, LAE and unearned premium reserves; and (3) The final term reflects after-tax investment return on surplus. This equation has been rearranged to yield the permissible loss and ALAE ratio, L, used to determine the statewide average indication. The target combined ratio, C, equals the sum of L and the underwriting expenses, E. The target rate of return

assumes a premium-to-surplus ratio of 2.00 to 1.00 for Auto Liability and 4.00 to 1.00 for Auto Physical Damage. The target rate of return also assumes a 15.0% after-tax return on equity.

Expense Analysis (G -3, G - 4)
Pages 3 and 4 of exhibit G summarizes underwriting expenses for 2004-2006 and the expected percentages of these expenses for the period in which the proposed rates will be in effect.

Unearned Premium Reserve (G -5, G -6)
Unearned premium reserve as a percentage of earned premium is a component of investment income on reserves. The change in unearned premium reserve as a percentage of earned premium is used as part of a component to offset underwriting income.

Loss and LAE Reserves (G -7, G -8)
Loss and LAE reserve (2004-2006), as a percentage of Incurred Loss and ALAE, is applied to the Permissible Loss and ALAE ratio and is the other component of investment income on reserves. This three-year average of the change in Loss and LAE as a percentage of Incurred Loss and ALAE is used as a part of a component to offset underwriting income.

Projected Investment Income Ratio & Net Realized Capital Gains (G -9, G -10)
This exhibit shows the projected investment income ratio as the average of the investment income ratios for 2004-2006. Also shown is the projected net realized capital gains, which is the average net realized capital gains for 1980-2006. Both ratios are shown as a percentage of total assets, and their sum represents our total investment gain.

Federal Taxes on Investment Income (G -11)
This exhibit contains the method used to compute federal taxes on investment income, based on the current federal income tax rate and the taxable portion applicable to each component of investment income.

Part II – Description of Changes

Exhibit H – Base Rate by Zip Code
Our proposed base rate changes by Zip Code are provided by coverage. (Exhibit H-1)
Territory alignment is showed as Exhibit H-2.

Exhibit I – Affinity Discount (Registered Nurses and Physicians)
We are proposing to increase our Affinity discount on Registered Nurses and Physicians from 5% to 10% across Bodily Injury/Property Damage, Uninsured/Underinsured Motorist, Personal Injury Protection, Comprehensive, and Collision coverage.

Exhibit J – Deductibles
We are changing the deductible factors for Comprehensive and Collision. Exhibit J provides the new factors for this change.

Exhibit K – FARA/Tier Factors
We are revising the FARA and Tier Discount Factors based on indications. Exhibit K provides the new factors for this change.

Part III- Manual Page Revisions

Finally, we have enclosed revised rate and rule pages for the changes listed above. Final manual pages will be provided upon receipt of your approval.

Our proposed effective date for this filing is August 1, 2008 for both New Business and Renewals. Your acknowledgement of receipt of this material is greatly appreciated.

Please direct questions or concerns to Yuan Li. His direct line is (323) 930-7699.

Very truly yours,

Rates and Rules Revision - Proposed Effective 08/01/08
Mid-Century Insurance Company, Inc. (AAR0801-402270)
Filing Reference Number: AAR0801-402270

Dear Commissioner Bowman:

We respectfully submit for filing revisions to our Private Passenger Automobile Rates and Rules for Mid-Century Insurance Company, Inc. The proposed effective date of August 1, 2008 is for both New Business and Renewals. Attached are supporting exhibits for this rate revision.

The overall calculated and proposed changes by coverage are as follows:

Mid-Century Insurance Company Coverage	**Indicated Change**	**Proposed Change**	**Estimated Annual $ Premium Effect**
Bodily Injury – Property Damage	13.7%	8.5%	$944,603
Uninsured Motorist	-1.4%	3.7%	$41,819
Personal Injury Protection	8.8%	9.7%	$84,274
Comprehensive	13.7%	11.1%	$78,606
Collision	-9.6%	3.3%	$133,035
Total	7.2%	7.2%	$1,282,337

The remainder of this filing is divided into three sections, to assist your review of our proposal, as follows:

Part I – Exhibits providing detailed explanations and data supporting our proposal
Part II – Description of Changes
Part III – Manual Pages

Part I – Supporting Exhibits

The following exhibits have been attached to provide actuarial support for the proposed overall rate level change.

Exhibit A , Summary of changes
A summary of our proposed changes and its premium effects regarding this filing are shown in Exhibit A.

Exhibit B, Pages 1 thru 5 – Accident Year Indicated Rate Level Changes for Bodily Injury/Property Damage, Uninsured Motorist, Personal Injury Protection, Comprehensive, and Collision coverages

Calculations of our rate level indications are contained in this exhibit. This exhibit shows indications based on three fiscal accident years of experience ending December 31, 2007, for all coverages: Bodily Injury - Property Damage, Uninsured Motorist, Personal Injury Protection, Comprehensive, and Collision. Varying weights for each year were used depending on claim volume within the coverage. The Comprehensive indication is catastrophe adjusted.

Indications for all coverages assume an effective date of August 1, 2008. They include earned premium at current rate levels and losses projected to the average accident date, June 1, 2009, using an annualized trend factor. Premium trends are applied to all coverages and account for the changing mix of business, including the effect of model year rating and car symbol drift on physical damage coverages and the effect of deductible shifts for liability coverages.

Each indication is calculated using a target combined ratio which includes consideration of investment income. Two distinct target combined ratios are used, one for Auto Liability coverages and one for Auto Physical Damage coverages. The details for both ratios are shown in Exhibit G.

Exhibit C – Credibility Weighted Loss Trend Selections, Determination of Loss Trend
Page 1 of Exhibit C provides an explanation of the credibility method used in obtaining annualized loss trend factors found on page 2 of Exhibit C.

Pages 3 thru 9 of exhibit B show the selected pure premium trend, computed from the selected severity and frequency trends, which are based on an exponential curve fit of Farmers Insurance Company data. A two-part trending procedure is used to trend losses by coverage. First, an historical trend is selected to trend each accident year of the experience period to the midpoint of the latest accident year. Second, a "future" trend is selected to bring the entire experience period (now at the midpoint of the latest accident year) to the midpoint of the projection period. The "Selected Historical Trend" by coverage is the Arkansas Farmers trend credibility-weighted with company-wide data. The credibility assigned to the Arkansas Farmers historical trend for a given coverage is the square root of the ratio of the average number of quarterly claims for that coverage and 6,148, with 6,148 being the standard for full credibility. As the future trends are judgmentally selected to reflect anticipated changes in loss costs, they are not credibility-weighted.

Exhibit D, Pages 1 thru 14
Loss Development Exhibits for by Coverage (BI, PD, UMBI, UMPD, PIP, CCD, and COLL)
Exhibit D, Pages 1 thru 14 provides accident year development of incurred losses and allocated loss adjustment expense paid to paid amount ratio for each coverage is included. Selected factors were generally chosen to be the "Olympic" (which excludes the high and low figure) average of the most recent five years of development factors, but when warranted by the data, a different selection method was used.

Accident year development of the ratio of paid allocated loss adjustment expense to paid loss is also included in Exhibit D for each coverage. Traditionally, we estimate accident-year Allocated Loss Adjustment Expense ultimates for each coverage separately. The ultimate ALAE ratios (Paid ALAE / Paid Loss) by coverage are developed by using the Bornhuetter-Fergusson method. Ultimate ALAE is the product of ultimate ALAE ratios and the ultimate incurred losses.

Exhibit E, Pages 1 thru 5 - Determination of Premium Trend
This exhibit shows the calculation of the premium trend components for each coverage. The trend is derived from a least squares exponential fit of the 6 months rolling average premiums, brought to current rate level, per policy for the years ending December 2007.

Exhibit F - Catastrophe Factor Calculation
The Comprehensive indication is catastrophe adjusted. The catastrophe factor is the ratio of the past twenty years total paid losses to the past twenty years total non-cat paid losses.

Exhibit G - Investment Income and Expense Exhibits
This exhibit provides support for the permissible loss and ALAE ratio used in our indications. To enable our company to serve the future insurance needs of our present policyholders and to meet our obligations in a growing market, our policyholders' surplus must increase at a rate sufficient to maintain a proper level in relation to written premiums.

Details of the calculations of our investment income and expenses are found in the following subparts of Exhibit G.

Permissible Loss and ALAE Ratio (G-1, G -2)
Pages 1 and 2 of exhibit G provides a summary of the parameters used in the formula for target total return as a percentage of premium. The equation for total return is the Calendar Year Return on Equity (CYROE) model. The equation consists of three terms: (1) The first term accounts for after-tax underwriting gain or loss, where 1-E-L=U, the underwriting profit provision; (2) The second term characterizes the after-tax investment return on losses, LAE and unearned premium reserves; and (3) The final term reflects after-tax investment return on surplus. This equation has been rearranged to yield the permissible loss and ALAE ratio, L, used to determine the statewide average indication. The target combined ratio, C, equals the sum of L and the underwriting expenses, E. The target rate of return assumes a premium-to-surplus ratio of 2.00 to 1.00 for Auto Liability and 4.00 to 1.00 for Auto Physical Damage. The target rate of return also assumes a 15.0% after-tax return on equity.

Expense Analysis (G -3, G - 4)
Pages 3 and 4 of exhibit G summarizes underwriting expenses for 2004-2006 and the expected percentages of these expenses for the period in which the proposed rates will be in effect.

Unearned Premium Reserve (G -5, G -6)
Unearned premium reserve as a percentage of earned premium is a component of investment income on reserves. The change in unearned premium reserve as a percentage of earned premium is used as part of a component to offset underwriting income.

Loss and LAE Reserves (G -7, G -8)
Loss and LAE reserve (2004-2006), as a percentage of Incurred Loss and ALAE, is applied to the Permissible Loss and ALAE ratio and is the other component of investment income on reserves. This three-year average of the change in Loss and LAE as a percentage of Incurred Loss and ALAE is used as a part of a component to offset underwriting income.

Projected Investment Income Ratio & Net Realized Capital Gains (G -9, G -10)
This exhibit shows the projected investment income ratio as the average of the investment income ratios for 2004-2006. Also shown is the projected net realized capital gains, which is the average net realized capital gains for 1980-2006. Both ratios are shown as a percentage of total assets, and their sum represents our total investment gain.

Federal Taxes on Investment Income (G -11)
This exhibit contains the method used to compute federal taxes on investment income, based on the current federal income tax rate and the taxable portion applicable to each component of investment income.

Part II – Description of Changes

Exhibit H – Base Rate by Zip Code
Our proposed base rate changes by Zip Code are provided by coverage. (Exhibit H-1)
Territory alignment is showed as Exhibit H-2.

Exhibit I – Affinity Discount (Registered Nurses and Physicians)
We are proposing to increase our Affinity discount on Registered Nurses and Physicians from 5% to 10% across Bodily Injury/Property Damage, Uninsured/Underinsured Motorist, Personal Injury Protection, Comprehensive, and Collision coverage.

Exhibit J – Deductibles
We are changing the deductible factors for Comprehensive and Collision. Exhibit J provides the new factors for this change.

Exhibit K – FARA/Tier Factors
We are revising the FARA and Tier Discount Factors based on indications. Exhibit K provides the new factors for this change.

Part III- Manual Page Revisions

Finally, we have enclosed revised rate and rule pages for the changes listed above.

Our proposed effective date for this filing is August 1, 2008 for both New Business and Renewals. Your acknowledgement of receipt of this material is greatly appreciated.

Please direct questions or concerns to Yuan Li. His direct line is (323) 930-7699.

Very truly yours,
MID-CENTURY INSURANCE COMPANY, INC.

Bill Martin, CPCU
Vice President, Auto Product Managemente

CREDIBILITY - WEIGHTED LOSS TREND FACTORS

While the trend factors based solely on Arkansas data are not fully credible for all coverages, they should be given some consideration in the ratemaking process. In selecting the degree of credibility assigned to these trends, we used a method similar to those described by L.H. Longley-Cook in his paper "An Introduction to Credibility Theory".

Longley-Cook points out that a sample of 1,537 claims would result in a frequency calculation, which has a 95% probability of being within 5% of the "actual" underlying frequency. He also points out that this sample size must be multiplied by a factor of (1+ T) to achieve the same degree of confidence in the calculated pure premiums, where T is a measure of the variance of the underlying distribution of claim costs. Longley-Cook goes on to state that this value "for most lines of insurance ranges between 2 and 4". Rather than estimate the value of T from the underlying claim s size distribution for each coverage, a mean value of 3 was selected. Thus, the number of claims per year (based on a rolling 4-quarter sum) needed to have a 95% probability of that annual pure premium amount's being within 5% of the "actual" is (1 + 3) * 1,537 = 6,148.

Longley-Cook also points out that a trend line is essentially a difference between points and that the credibility of the trend factor would, therefore, be lower than the credibility of the individual points. This decrease in credibility was taken into account in selecting a relatively severe criterion (95% within 5%) for each point.

A sample of 6,148 claims per year was assumed to be fully credible. Partial credibility was based on:

$$\text{Credibility} = (\text{Number of Claims in Rolling 4-Quarter Period} / 6{,}148)^{1/2}$$

The compliment of the credibility was assigned to the Companywide trends.

CREDIBILITY - WEIGHTED LOSS TREND FACTORS

While the trend factors based solely on Arkansas data are not fully credible for all coverages, they should be given some consideration in the ratemaking process. In selecting the degree of credibility assigned to these trends, we used a method similar to those described by L.H. Longley-Cook in his paper "An Introduction to Credibility Theory".

Longley-Cook points out that a sample of 1,537 claims would result in a frequency calculation, which has a 95% probability of being within 5% of the "actual" underlying frequency. He also points out that this sample size must be multiplied by a factor of (1+ T) to achieve the same degree of confidence in the calculated pure premiums, where T is a measure of the variance of the underlying distribution of claim costs. Longley-Cook goes on to state that this value "for most lines of insurance ranges between 2 and 4". Rather than estimate the value of T from the underlying claim s size distribution for each coverage, a mean value of 3 was selected. Thus, the number of claims per year (based on a rolling 4-quarter sum) needed to have a 95% probability of that annual pure premium amount's being within 5% of the "actual" is (1 + 3) * 1,537 = 6,148.

Longley-Cook also points out that a trend line is essentially a difference between points and that the credibility of the trend factor would, therefore, be lower than the credibility of the individual points. This decrease in credibility was taken into account in selecting a relatively severe criterion (95% within 5%) for each point.

A sample of 6,148 claims per year was assumed to be fully credible. Partial credibility was based on:

$$\text{Credibility} = (\text{Number of Claims in Rolling 4-Quarter Period} / 6{,}148)^{1/2}$$

The compliment of the credibility was assigned to the Companywide trends.

FIG Consolidated figures exclude Foremost companies.
Commissions & Brokerages are computed as a percentage of Written Premium
The 2004 - 2005 Other Acquisition Expense and General Expense have been restated to conform to 2006 accounting conventions.
The Selected Ratio for Other Acquisition and General Expenses is adjusted for the following
(1) state-specific expenses: removal of the latest year amounts and inclusion of 3-year average for Arkansas, and
(2) advertising expense and underwriting fees expected in the prospective period.
Other Acquisition and General Expenses are computed as a percentage of Earned Premium.
