PROGRESSIVE DIRECT INSURANCE COMPANY
PRIVATE PASSENGER AUTOMOBILE PROGRAM
RATES FILING FOR THE STATE OF ARKANSAS

Rate Order of Calculation

The first step of the rate calculation formula is to determine the Household Factor for all eligible to be rated drivers. For policies where there are more drivers than vehicles, the Household Factor is the average of the highest ranked drivers, up to the number of vehicles.
The rank is determined by the BI factors from highest to lowest.
The BI factors are determined for all eligible to be rated drivers as follows:
(Driver Class factor + Driving Points Factor -1) * (1 - Distant Student Discount)
* (1 - Minor Child Discount) * (1-Good Student Discount) * (1 - Senior Citizen Discount) * (1 - College Grad Discount)
The highest ranked drivers up to the number of vehicles on the policy (but in the case of a Named Operator policy, at least one) are then used in the rate determination below.
